## Constraint Satisfaction

A non-technical introduction

Edward Tsang (Copyright) 5 Friday, 29 January 2010

## Sample Constraint Applications

- Resources Allocation
  - Staff rostering, timetabling
  - British Telecom's work force scheduling i
  - British Airway's flight scheduling i
- Logistics
  - Satellite scheduling
  - Radio links assignment (military & mobiles)
  - Telephone Network routing
  - Airport / container port
- Transportation
  - **ILOG Dispatcher** for vehicle routing
  - Train and bus scheduling
  - Collective transportation i
- Industrial Scheduling i
  - Just-in-time scheduling
  - Hardware configuration
  - Car sequencing i

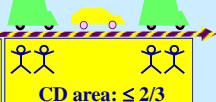

Edward Tsang (Copyright) 6 PR CS LS F U Friday, 29 January 2010

## Car Sequencing Problem

Options					
ABS	×	√	√	×	
CD	×	×	√	√	
...					
Production:	30	30	20	40	Total: 120

ABS area:  $\leq 3/5$

CD area:  $\leq 2/3$

Edward Tsang (Copyright) 7 PR CS LS F U Friday, 29 January 2010

## Airline Applications

*Constraint satisfaction and optimization are behind many applications in airline operations; e.g. British Airways uses **ECLiPSe (IC-Parc)** for scheduling aircraft to serve their flights and **ILOG Solver** for aircraft stand allocation at airports.*

Edward Tsang (Copyright) 8 PR CS LS F U Friday, 29 January 2010

## Transportation

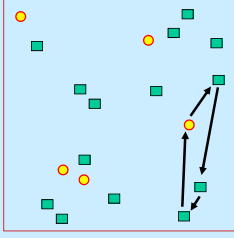

*Constraint satisfaction is one of the core technologies in transportation optimization. For example **Guided Local Search** was used in **ILOG Solver's** vehicle routing package, **Dispatcher: Cairo/Line** schedule for collective transportation.*

Edward Tsang (Copyright) 9 PR CS LS F U Friday, 29 January 2010

### BT's Workforce Scheduling

BT has many jobs to be done in UK every day. It has to schedule a large number of teams to serve these jobs, subject to time, skill and other constraints. Saving of 0.5% could mean Millions of Pounds per year. *Guided Local Search* achieved the best results in one of BT's challenge problems.

● Technicians    ■ Jobs

### CP in Steel Industry

IBM helped Korea's biggest steel manufacturer to apply constraint technology to schedule its production to meet orders. This include the allocation of existing stocks to orders, subject to various constraints, such as size, quality and colour, in order to minimize waste and cost.

Orders      Steel Slabs

Edward Tsang (Copyright) 11 PR CS LS F U Friday, 29 January 2010

### What is Constraint Satisfaction?

- Constraint satisfaction is a **decision problem**
  - You are given a number of decisions to make
  - For each decision, you are given all the choices
  - Decisions **constrain** each other
- Your task is to make those decisions without violating any of the constraints
- Sometimes you want the “best” solution
  - If so, you have a (**constrained**) **optimisation** problem

Edward Tsang (Copyright) 12 PR CS LS F U Friday, 29 January 2010

### The Constraint Satisfaction Problem

Variables (Decisions)	Domains (values available)	Constraints On assignments					
$x_1$	<table border="1"><tr><td></td><td></td><td>X</td><td></td><td></td></tr></table>			X			<ul style="list-style-type: none"> <li><math>x_1 \neq x_2</math></li> <li>If <math>x_2 \in \{a, b\}</math> then <math>x_3 \notin \{c, d\}</math></li> <li><math>0 &lt; f(x_1, x_3, x_4) \leq 1</math></li> </ul>
		X					
$x_2$	<table border="1"><tr><td>X</td><td></td><td></td><td></td><td></td></tr></table>	X					
X							
$x_3$	<table border="1"><tr><td></td><td></td><td></td><td>X</td><td></td></tr></table>				X		
			X				
$x_4$	<table border="1"><tr><td></td><td></td><td>X</td><td></td><td></td></tr></table>			X			
		X					

- Constraint satisfaction is a **decision problem**
- Task: make decisions without violating constraints
- Sometimes you want the “best” solution

Edward Tsang (Copyright) 13 PR CS LS F U October 2003

### Why constraint satisfaction?

- It is a very **general** problem (seen everywhere)
  - Mainly logistics, scheduling, resources allocation
- **Specialized methods** available
- Now multi-million Pounds/Dollars business
- Scientific challenges:
  - **Combinatorial explosion** (fundamental problem)
  - **Modelling** (engineering problem)

Edward Tsang (Copyright) 14 PR CS LS F U Friday, 29 January 2010

### Combinatorial Explosion of the Car Sequencing Problem

- Schedule 30 cars:
  - Search space: 30 factorial  $\cong 10^{32}$  leaf nodes
- Generously allow:
  - Explore one in every  $10^{10}$  leaf nodes!
  - Examine  $10^{10}$  nodes per second!
- Problem takes over **32 thousand years** to solve!!!
  - $10^{32} \div 10^{10} \div 10^{10} \div 60 \div 60 \div 24 \div 365 \cong 31,710$
- How to contain **combinatorial explosion**?

Edward Tsang (Copyright) 15 PR CS LS F U Friday, 29 January 2010

## Use The Force

- Constraints brought the problem here
- Constraints guide us to solutions
- Experts will follow the lead by constraints
- See Guided Local Search later
- The Incentive Method was used in financial forecasting and bargaining
- Reference to Daoism (Taoism)

## Constraint Satisfaction

A more technical account

Edward Tsang (Copyright) 18 Friday, 29 January 2010

## Constraint Satisfaction: What is it all about?

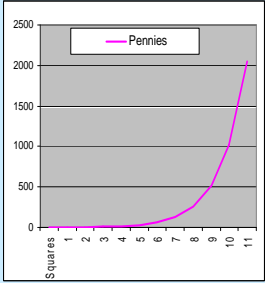

- Many problems involve finding combinations of values to variables, e.g.
  - Telecom services scheduling
  - Deciding where to put warehouses
- Combinatorial problems are hard in nature
- How big a problem can one solve?
- Constraint research aims to extend our boundaries in these problems
  - It's all about algorithms, efficiency, problem solving ...

Edward Tsang (Copyright) 19 PR CS LS F U Friday, 29 January 2010

## Combinatorial Explosion

	A	B	C	D	E	F	G	H
1	1	2	4	8	16	32	64	128
2								
3								
4								
5								
6								
7								
8								10 <sup>19</sup>

- Put 1-penny in-square 1
- 2 pennies in square 2
- 4 pennies in square 3, etc.
- Even the world's richest man can't afford it
- 10<sup>19</sup> p = £100,000,000 Billion

Edward Tsang (Copyright) 20 PR CS LS F U Friday, 29 January 2010

## Problem Formulation (Modelling)

Is my problem a constraint satisfaction problem?

*If so, I can apply established techniques*

Edward Tsang (Copyright) 21 Friday, 29 January 2010

## What is constraint satisfaction?

Given:

- Z: a set of **variable** (*Decisions*)
- D: mapping each variable *x* to a **domain** *D<sub>x</sub>* (*fixed choices*)
- C: **constraints** restricting the values that variables can take simultaneously

Task:

- Assign one value to each variable satisfying all the constraints

Edward Tsang (Copyright) 22 PR CS LS F U Friday, 29 January 2010

### The 8-Queens Constraint Satisfaction Problem

Sample Solution

- Task: to put 8 queens onto the board such that no queen attacks others
- No two queens appear in the same row, column and diagonal

Edward Tsang (Copyright) 23 PR CS LS F U Friday, 29 January 2010

### Constraint Programming

- Areas: modelling, algorithms, algorithm mapping, monitoring, packages

Edward Tsang (Copyright) 24 PR CS LS F U Friday, 29 January 2010

### Constraint Satisfaction Techniques A Brief Overview

- Propagation constraints in order to rule out dead-ends
- Search systematically to ensure that solutions are found if they exist
  - Many heuristics regarding where to *look* next
- Heuristic search: exploring promising solutions at the risk of missing solutions
  - Many heuristic regarding where to *move* to

Edward Tsang (Copyright) 25 PR CS LS F U Friday, 29 January 2010

### Constraint Techniques Overview

Constraint satisfaction

Constrained optimisation

**1. Problem Reduction**

- To reduce domain size
- To add or tighten constraints
- Aims:
  - To reduce a problem to easier ones
  - To detect dead-ends
  - To achieve backtrack-free search

**2. Search**

- Systematic Search**
  - Lookahead
  - Learning nogoods or backtrack intelligently at dead-ends
  - Ordering heuristics
  - Aim: to exhaustively search space
- Stochastic methods
  - To repair solutions heuristically
  - Aim: to find solutions fast, sacrificing completeness

**3. (Solution Synthesis)**

Edward Tsang (Copyright) 26 PR CS LS F U Friday, 29 January 2010

### Backtracking Search In The 8-Queens Problem

Complete search, till solution found, or "no solution" is concluded

- Place one queen per row
- Place one queen at a time
- Examine each column

Backtrack at dead-ends

Edward Tsang (Copyright) 27 PR CS LS F U Friday, 29 January 2010

### Forward Checking Search

- Problem reduction – a major technique
- Combined with search methods
- Reduce domain of future variables
- Detect dead-ends
  - To backtrack early

Dead-end detected after Queen 4 – no legal space for row 6, backtrack...

Edward Tsang (Copyright) 28 PR CS LS F U Friday, 29 January 2010

## Constraint Optimization

- Constraint Satisfaction & Optimization
  - Some solutions are better than others
- Partial Constraint Satisfaction
  - Accept best solution when no solution is found
- Relevant techniques:
  - Complete: Branch & Bound
  - Incomplete: HC, SA, Tabu, NN, GA, GLS

Edward Tsang (Copyright)

29

Friday, 29 January 2010

## Constraint Applications

- Scheduling
  - Job-shop scheduling, timetabling, nurse rostering
- Resource Allocation
  - Decide where to locate warehouses
- Supply chain management
  - Just-in-time scheduling
- Logic programming, database, agent technology, AI planning, etc

Edward Tsang (Copyright)

## Commercial Constraint Business (Multi-million Pounds business)

- ILOG Solver (SAP subsidiary, France)
  - “The ILOG-Solver inside” solutions
- Cosytec CHIP (European consortium)
  - Pioneer of constraint technology, consultancy
- ECLIPSE (IC-Parc, Imperial College, UK)
  - Supported by ICL, BA, etc
- ACTENUM (Canada)
- Many more companies & products

Edward Tsang (Copyright)

31

Friday, 29 January 2010

## Constraint Research Frontier

Very active in all major conferences

- Modelling
- Constraint optimization, soft constraints
- Stochastic search
- Dynamic constraint satisfaction
- Distributed constraint satisfaction
- .....
